Nexxt™ is the patient personalised, dynamic clinical pathway software platform you may have heard about.

Auckland and Northland have been the first regions to implement Nexxt™ and have just completed the ‘pilot’ phase in 92 general practices across the region. The 92 practices have used the software with their patients and have provided feedback which will lead to further development and refinement of the software and future integration requirements.

The inspiration for the development of Nexxt™ was the GPS and how this technology changed the ease of using maps for car drivers. Nexxt™ uses patients’ information, clinical best practice (the map) and suggests the next best recommended action for the doctor or nurse. Decisions are interpreted from a regionally agreed clinical pathway or algorithm (map). This means Nexxt™ is quick and easy for a clinician to use within their workflow and the software collects data which can be used at the next appointment by other providers.

Nexxt™ is an innovative way of presenting personalised clinical pathways for an individual which;

• takes into account the patient’s current phase of care
• their history, examination and investigations
• previous treatment and outcomes
• care provided by other providers
• enabling concurrent actions
• allows the sharing of pathways with colleagues and patients
• supports long term chronic care management and a team approach
• supports other technologies, for example eReferrals, hospital systems

Nexxt™ is built on a platform which can be extensively scaled to manage 100s of pathways for many health providers.

Accolades for Nexxt™

It was recently announced that Nexxt™ has been selected as a finalist in the New Zealand Innovators Awards, in the Health and Science category for 2015.

This is a huge accolade for the product, its current implementation and future potential. Nexxt™ is a product from Pathway Navigator Ltd. Pathway Navigator is a partnership between health IT developers Healthpoint and Next Generation Software.

NZ Innovation Council chief executive officer Louise Webster says, in a media release, “this year’s entrants give a real sense Kiwi innovation is moving into the mainstream, demonstrating world leading approaches to innovation with many businesses going global from day one.”
Dr Paul Salmon – Dermatologist at the Skin Centre

The most exciting thing to happen in melanoma treatment in the last two weeks has been the registration of Pembroluzimab (Keytruda) by Medsafe.

This new treatment belongs to a small and new class of drugs called “checkpoint inhibitors” that prevent melanoma from downregulating the body’s immune response to melanoma. At $40,000 for a course of eight, three weekly treatments this medication is very expensive but is a fraction of its full price in the U.S. and of other targeted treatments currently available. Recent stage three studies show it quadruples survival at two years over standard chemotherapy (60% vs 15%).

Dr Walter van der Merwe – Hypertension Specialist and Nephrologist

From 1 December 2015 Walter has a new location on the North Shore and a new contact number and fax number for all referrals.

He has moved from 1 Shea Terrace, Takapuna to the Apollo Medical Centre (in association with Cardiology Institute). The Ascot and Queen Street locations are unchanged.

He is happy to be contacted about urgent referrals, or for advice on his mobile (021) 453 033, or by email waltervandermerwe7@gmail.com

Dr Walter van der Merwe FRACP, Hypertension Specialist and Nephrologist

• Suite 109, Level 1, 119 Apollo Drive, Albany (inside Cardiology Institute)
• Level 2/ 187 Queen Street, Auckland Central
• Ascot Office Park, Level 3, Building B, 93-95 Ascot Avenue, Greenlane East

Appointments (all locations - new) Ph: (09) 638 5255, Fax: (09) 638 6022

Dr Patrick Kay – Cardiologist

Expert handling of angina and coronary artery disease. Patrick is one of Auckland’s busiest and most experienced general and interventional cardiologists. Patrick trained in cardiology in New Zealand before working in the Netherlands where he obtained a PhD in interventional cardiology.

Since 2005 he has worked at all major public teaching hospitals in Auckland and he continues to supply public angioplasty services across the whole Auckland region.

Patrick consults broadly on all areas of cardiology with a particular interest in preventative cardiology, hypertension and cholesterol.

He offers the following investigations and treatment:

Cardiac CT, invasive angiography and coronary angioplasty.

Echocardiography, treadmill exercise testing, and blood pressure and Holter monitoring.

Clinics are held all over Auckland including Albany (Apollo), Silverdale, Ponsonby, MercyAscot, West Auckland, Botany (Eastcare) and Pukekohe. Urgent patients are welcome and evening appointments are available.

He is also an affiliated provider to Southern Cross and Sovereign.

Patrick offers you a friendly responsive service and looks forward to your call. All Clinics Ph: (0800) 997 650, Fax: (09) 623 2026

Dr Jane Casey – Psychiatrist and Psychogeriatrician

Jane is a consultant psychiatrist with expertise in the assessment and management of presentations across the spectrum of adult mental health. Her areas of interest include depression, anxiety, bipolar disorder, psychotic disorders, personality and alcohol-related issues.

Psychiatry of old age is her sub-specialty and she is the current chair of this faculty in the RANZCP. Jane has expertise in memory, cognitive, functional and capacity assessments and an appreciation of the complexity of issues facing the older person.

Jane has acquired much knowledge and experience in pharmacological management and also relates with her patients in an eclectic psychotherapeutic style. Consultation and engagement with family and significant others is another strength. Home assessments and visits to residential care are also possible.

Consultations with Dr Jane Casey are now available at 25 Vermont Street Ponsonby.

Dr Rinki Murphy – Diabetes and Specialist Physician

Rinki is a consultant medical physician at ADHB, CMH and consults at Mercy Specialist Centre. Rinki specialises in the management of diabetes (including insulin pump therapy, continuous glucose monitoring) and obesity. She provides medical supervision for a multi-disciplinary weight loss program using a very low calorie diet and medical management of those undergoing bariatric surgery. She has particular interest in monogenic forms of diabetes (see monogenic guidelines on www.nzssd.org.nz) and severe insulin resistance.

For appointments and enquiries at Mercy Specialist Centre:
Ph: (09) 623 1170, Fax: (09) 623 1172, Email: R.Murphy@auckland.ac.nz
NZ Respiratory and Sleep Institute
Dr Jacob Twiss – Paediatric Respiratory and Sleep Specialist
A graduate from Auckland Medical School, Jacob trained in paediatric respiratory and sleep medicine at Starship Children’s Hospital and the Melbourne Children’s Sleep Unit before returning to a specialist position at Starship. He gained a PhD in paediatric bronchiectasis and has considerable experience working with children and young people with a wide variety of respiratory health issues including:

- persistent cough
- recurrent chest infections
- asthma
- obstructive sleep apnoea / sleep disordered breathing
- congenital lung disease
- neuromuscular problems that affect breathing.

Dr Twiss is consulting at NZRSI one day per week by prior appointment. Referrals can come through GPs or paediatricians.

Auckland Weight Loss Surgery

Surgeons Grant Beban and Richard Babor have moved into new premises conveniently located on the Ascot Hospital site. We have also welcomed surgeon Jon Morrow to the practice to further enhance cover for our patients.

Working under the dual banners of Auckland Laparoscopic Surgery and Auckland Weight Loss Surgery, Grant, Richard, Jon and their team specialise in:

- **Oesophagogastric surgery:** open and laparoscopic surgery for reflux disease, hiatus hernia, achalasia, GIST and oesophago-gastric cancer.
- **Weight loss (Bariatric) surgery:** laparoscopic gastric bypass, gastric sleeve and complex or revision cases.
- **General surgery:** open and laparoscopic surgery for gallbladder and biliary disease and hernias.

We offer a multidisciplinary approach to surgical services, with a clinical nurse specialist, dietician and psychologist providing patient care and support leading up to and following surgery.

Grant, Richard and Jon all work in public and private practice. Grant also works at Auckland Hospital where he has introduced an obesity surgery programme. He also served on the steering committee for a nationwide strategy on management of morbid obesity in New Zealand. Richard also works at Middlemore Hospital and about half of his time is spent on obesity surgery. Jon has been involved in the obesity surgery programme at Middlemore Hospital for the past four years. He is the current New Zealand representative on the Obesity Surgery Society of Australia and New Zealand.

Grant, Richard and Jon are all active in research, education training and governance.

Appointments at Lvl 1, Ascot Central, 7 Ellerslie Racecourse Drive.

Mr Andrew Bowker – Laparoscopic General Surgeon

Andrew has 23 years’ experience in private surgical practice in Auckland, during which he has carried out over 10,000 laparoscopic procedures. He has what is probably the world’s largest experience of laparoscopic inguinal hernia repair (over 7,300 repairs).

His conversion-to-open rate for laparoscopic cholecystectomy (4 of 2,700 cholecystectomies and no major bile duct injuries) is extremely low. He helped establish Laparoscopy Auckland as a centre of excellence for laparoscopic general surgical procedures.

- laparoscopic and open hernia repair
- laparoscopic cholecystectomy
- laparoscopic fundoplication.

He is a Southern Cross Affiliated Provider for the above procedures.

For referrals:

**Breast Associates**

The breast specialists at Breast Associates are a team of experts who are able to provide the highest standards in complete breast care. Between them, they have cared for more than 20,000 women over 16 years.

Our Auckland breast clinic provides a caring and supportive environment, where trust and confidence are an integral part of the patient experience.

All consultations, breast imaging and diagnostic tests are available on site. A counselling service is also available.

**Our team specialises in:**
- diagnosing and treating breast cancer
- diagnosing breast lumps
- breast reconstruction
- diagnosing and treating breast infection
- diagnosing and treating breast pain
- advice on family history
- any breast concerns.

**Our breast care team**
The Breast Associates team focuses on providing holistic and integrated care to manage breast problems. Each breast doctor specialises either as a surgeon or a breast physician:

- Mr. Alexander Ng – breast, melanoma and general surgeon
- Mr. Wayne Jones – breast, general and endocrine surgeon
- Dr Eletha Taylor – breast, melanoma and general surgeon
- Dr Marli Gregory – breast physician
- Dr Sonja Freese – breast physician
- Dr Caroline Gray – breast physician
- Dr Beverley Sweeten-Smith - breast physician.

We work with Ascot Radiology to bring patients the latest digital mammography, breast ultrasound and MRI imaging, ensuring the most accurate scans in the shortest possible time frame.

**Appointments at Ascot Central**

**Wellness Support Service**

Support Stream offers holistic and practical support for people who are managing their mental health or dealing with a difficult time in their life. Support Stream is a self-funded mobile service, our wellness coaches can meet with people in their own home or in the community.

Focus is on positive outcomes for people experiencing:
- anxiety
- depression
- stress and burn out
- loss and grief
- pre and post-natal concerns
- other distressing emotions

Support Stream works with youth (13 and over), adults and their families. The support options include:
- creating your own wellness plan
- understanding your mental health
- dealing with distressing emotions
- wellness strategies including relaxation, sensory and mindfulness techniques
- managing your daily tasks and activities
- healthy living: nutrition, exercise, sleep and smoking cessation
- employment/education support
- support for carers and family.

Wellness coaches work in collaboration with people to achieve their personal goals.

To make an enquiry or a referral please contact Shelley Southgate on:
(027) 200 6355, or Freephone: (0800) 196 970,
Email: shelley.southgate@supportstream.co.nz
Or send a referral and enquiry via the website:
www.supportstream.co.nz

**Choosing where to labour and birth is one of the most important decisions a pregnant woman makes.**

Research proves that women who give birth in a primary maternity unit have less incidence of medical interventions such as episiotomies, caesarean sections and the use of forceps or ventouse during labour. The evidence also proves that women have better outcomes if they start labour in a primary maternity unit rather than starting labour in a hospital.

Registration is done antenatally. Registration forms are available through your Lead Maternity Care provider. Alternatively you can contact Birthcare by Ph: (09) 374 0800, Fax: (09) 374 0844,
Email: parnell@birthcare.co.nz or go to our website – www.birthcare.co.nz or via Healthpoint.

Auckland DHB

To all GPs,

CF carrier testing can be arranged by you. Therefore, Genetic Health Service - NZ is now declining referrals.

To arrange testing we would recommend:

1. You should send an EDTA blood sample to Canterbury Health Laboratories for CF panel testing, this is generally only offered to individuals with a family history of CF. This test identifies almost 90% of carriers in the caucasian population.

2. If your patient is confirmed as a CF carrier then their partner should also have CF carrier testing, which can be arranged through their own GP.

3. If either partner is not from a caucasian background further testing (sequencing) may be appropriate. The lab can advise you further about this if necessary.

4. If there is a known family mutation you need to provide the lab with details of this mutation (and/or the name & date of birth of the affected/ carrier family member so the lab can ensure they are testing for the correct mutation).

Outcome advice:

1. If both partners are found to be CF carriers then there is a risk of them having a affected child and they should be referred to us for a discussion about this and their options in a future pregnancy.

2. If one partner is not a carrier of one of the mutations tested for on the panel their residual risk of being a carrier for a rare mutation is approximately 1 in 200 and the chance of them having a child with CF would then be very low.

You can contact the on call Genetic Counsellor if you have any questions.

Websites:

For more information about referring patient to the Genetics Services NZ - Northern Hub please visit us on our healthpoint website: www.healthpoint.co.nz/public/genetics/genetic-health-service-nz-northern-hub

Our national website: www.genetichealthservice.org.nz/for_health_professionals

Gynaecology - Faster Cancer Treatment Pathways

The Ministry Of Health has introduced faster cancer treatment targets for patients presenting to the District Health Board with nationally defined ‘red flags’ for patients with high suspicion of cancer (HSC).

Within the gynaecology service there are 7 definitions; Post-Menopausal Bleeding (PMB) and a palpable, rapidly growing or incidentally found pelvic mass being the most common presentations.

Once these patients are assigned an HSC flag, they are tracked through their pathway and must comply with the Ministry of Health 62 day target from referral date, to the date of first treatment, if they are subsequently diagnosed with cancer as part of that pathway.

The Ministry of Health has given clear guidance that women presenting with:

- Post-menopausal bleeding can be excluded from HSC flag if they have a normal physical examination, smear and vaginal ultrasound.

- A palpable or incidentally-found pelvic mass have a high suspicion of cancer. High suspicion of cancer can be excluded if investigations (USS and tumour markers) suggest benign disease.

To ensure compliance with the Ministry of Health targets and to ensure our patients/population receive the right care at the right time, referrers are being requested to ensure physical examination, smear and vaginal ultrasound (USS) are carried out prior to referral. The results from these are pertinent information required for appropriate triaging and to avoid delays with further requests for this information.

If there is no evidence of a physical examination or smear being carried out on the referral, the referral will be declined and sent back to the referrer with the recommendation to perform a PV exam and smear. The referrer is also being strongly encouraged to get an ultrasound done prior to referral where:

- The patient has funds for an USS to be done within the private sector OR
- The referrer uses his/her practice's Access to Diagnostics (ATD) funds to purchase an USS in the private sector OR
- If the above two are not options or USS cannot be obtained within 2 weeks
- Make an e-referral (or other referral) to ADHB radiology and select the ‘timeframe’ option ‘within 1-2 weeks’ on the e-referral form.

Relevant clinical information must be included to support urgent referral.

Radiology acceptance criteria for USS referral into the DHB (or ATD) are as follows:

Post-menopausal bleeding - defined as bleeding after 1 year of amenorrhea. Pelvic mass on examination.

Northland DHB

Oxygen Therapy Service:

The rationale and referral process for home oxygen therapy is now available on the respiratory service Healthpoint site. The major change of note is that requests should now be submitted via the respiratory service eReferral. Please review the information on the site to guide your referrals to ensure they contain the necessary information to allow them to be actioned.

The contact details for the clinical nurse manager of this service has been added to the service contact details list in case you have any questions about the service.

Child Eczema Service:

The access criteria for this specialist nurse lead service has changed from simply any child under 2 yrs. with eczema to any child under 16 yrs. with problematic eczema that has not responded to maximal topical therapy.

This is a specialist clinic that aims to see children where standard management has not lead to adequate control. The key management aspects of education and addressing compliance should be undertaken within Primary Care.

To ensure appropriate use of the very limited specialist nurse resource, required referral information has been defined and added to the Child Health Clinic’s Healthpoint site. There is a downloadable referral checklist available to assist with your referrals. The referral must include the information outlined on the checklist as well as a photo of the skin to give a clear indication of extent and severity. This does open up the ability for virtual management advice to be provided from the nurse specialist, avoid both wait and travel for the patient and their family.

Referrals should be via the Child Health Clinic eReferral and NOT via the dermatology eReferral.

GP access to CT scans

The scope of GP requested CT scans has been extended to include CT heads for the investigation of cognitive impairment where the patient is being managed on the cognitive impairment clinical pathway.

We have added a CT request to the eReferral system. Full details of the CT referral process, criteria and required referral information has been added to the radiology Healthpoint site.

CM Health launches new values and strategic plan

CM Health launched its refreshed values and strategic plan on Thursday 10 September, signalling a new and exciting era for our organisation. This work has been months in the planning with over 2000 people sharing their ideas as to how we can consistently be at our best for our patients, whaanau and families, and each other, and the choices we need to make to progress our goal to work together to achieve health equity. While the conversations around our ‘Healthy Together’ strategy will continue, our new values: Kind, Valuing everyone, Together and Excellent, tell a story of how we can provide great care and a great experience at work.

Lena Crawford
Web Content Manager | Communications Team

Waitemata DHB

New Smoke free Programme for Pregnant Women

Auckland and Waitemata DHBs have recently launched a new stop smoking programme, ‘Living Smoke free – it starts with you’. This programme is an incentives-based smoking cessation in pregnancy pilot programme for pregnant women who smoke. Pregnant women will receive professional support to stop smoking with the additional incentives of vouchers to help stop smoking in pregnancy.

Why are we doing this?

While a reduction in smoking is a key priority in a number of health strategies, the goal of this new programme is to provide better help for pregnant mothers that smoke to quit, and to further protect the unborn child from the harmful effects of maternal smoking in pregnancy. It is estimated that in excess of 1,000 pregnant women smoke per year within Waitemata DHB and Auckland DHB combined, with more than 65% of these women being Māori or Pacific.

What are we going to do?

This pilot programme will use an incentives-based approach to encourage women to stop smoking in pregnancy, and in particular specifically target Māori and Pacific women.

The voucher incentives scheme supports and supplements existing contracts with our Stop Smoking Service providers to provide Pregnancy smoking cessation in a culturally appropriate manner.

Pregnant women successfully completing the programme can receive up to $310 in vouchers, how much they receive depends upon when they register and their successful completion of the programme.

Who can participate?

The programme is available for pregnant women who smoke, and live in the Auckland District Health Board or Waitemata District Health Board areas. Pregnant women can enrol in the programme up until 38 weeks of pregnancy.

How do GPs refer patients to the service?

Primary care providers can enrol women by making a referral to a local face-to-face service via CareConnect.

Specialist Stop-Smoking Support Providers

The following specialist smoking cessation services are available to help support this programme:

Auckland DHB area:
- Auckland DHB Smoke free Pregnancy Service, Call (0800) 667 833 / (0800) NO PUFF or Text (027) 326 7334
  Email: smokefree@adhb.govt.nz
- Pacific Quit Smoking Service, Call (0800) 867 848 or Text to (021) 742167
  Email: pacificquit@adhb.govt.nz

Waitemata DHB area:
- Waitemata PHO, Call (0508) 784 866, (0508) 784 866 or Text (021) 400 793
  www.facebook.com/smokefreecommunities
- Pacific Quit Smoking Service, Call (0800) 867 848 or Text to (021) 742 167
  Email: pacificquit@adhb.govt.nz

To obtain programme resources or for further information please contact: Tracy Walters: tracy.walters@waitematadhb.govt.nz.
We would like to thank the 300 GPs who attended our GP Symposium held at the Waipuna Conference Centre, 58 Waipuna Road, Mt Wellington on Saturday 22 August. The talks are now available for viewing on our website and the feedback received is valuable in assisting with formulating future themes and programmes.

Saturday 20th August is the date for our 2016 event and the venue remains the same. If you did not receive our invitation this year and wish to be included for future events, please email ahg@heartgroup.co.nz with your contact details.

We appreciate your support and look forward to continuing to be of service to the GP community.
